OUTLOOK AND STRATEGY

Local U.S. dollar time deposit rate has remained steady despite the decision of the Fed to slowly move toward monetary normalization, i.e., phasing out quantitative easing (QE) and an upward adjustment of the Fed Funds rate from the current near zero level.

Investors are still very much divided as to when the Fed would actually start raising rates, whether in Sept. or Dec. While the U.S. economic recovery is firmly on track, the situation elsewhere is not as encouraging. Europe's recovery remains fragile, Japan is still fighting deflation, China is slowing down, oil producers are hurting from the sharp fall in crude prices, while commodity producers in general are suffering from weak global demand. An off-timed rate hike could rattle global markets and create a negative feedback on the U.S. Nevertheless, the consensus is a Fed rate hike within the year.

The USMMF is wholly invested in time deposit facilities of various banks.
