### OUTLOOK AND STRATEGY

Local U.S. dollar time deposit rate has remained steady despite the decision of the Fed to slowly move toward monetary normalization, i.e., phasing out quantitative easing (QE) and an upward adjustment of the Fed Funds rate from the current near zero level.

As expected, the US Federal Reserve finally raised its federal funds target rate to 0.25%- 0.5% from zero -0.25% previously. The Federal Open Market Committee (FOMC) noted that further rate increases will be gradual and will follow the pace of the economy. The FOMC expects the fed funds target rate to rise toward 1.5% and 2.5% by the end of 2016 and 2017, respectively.

Despite this initial increase, the policy stance remains accommodative as principal from maturing agency and US Treasury notes will still be reinvested.

Financial markets continue to face strong headwinds from rising U.S. interest rates, strong US dollar, global slowdown and the May presidential elections. These could create continued volatility and uncertainty in the near term.

We shall closely watch this evolving development.
