INVESTMENT OBJECTIVE AND STRATEGY

UCMF seeks to prevent loss of income at all times by investing in deposits in local banks. It also aims to surpass its benchmark which is the 30 Day Special Savings Rate. This should not be construed, however, as a guarantee of yield.

- the UCMF is suitable only for investors who:
 - have a risk profile of conservative based on the results of the accomplished Client Suitability Assessment Form;
 - has an investment perspective which is short term in nature and willing to put all his/her/their money only in time deposits;
 - are willing to forego the higher long term returns generated by riskier investment; and
 - understands the risks of investing in products which are non-deposit, non-bank and with no recourse to the Bank.

OUTLOOK AND STRATEGY

GDP growth eased to 6.0% in 2Q from a revised 1Q growth rate of 6.6% (originally 6.8%) and slower compared to the 6.6% expansion recorded in 2Q 2017 (Table 1). The headline numbers, however, masked the strength of the underlying economy. Domestic demand remained strong driven by government spending, investments, and to lesser extent, private consumption. On the aggregate, the slowdown was largely due to the continued contraction of net export and weakness of agriculture.

However, higher petroleum taxes, supply bottlenecks in agriculture on top of strong economic growth have all contributed to higher consumer prices. August inflation increased to 6.4% from only 3.4% in January of this year. As inflation accelerated, the Bangko Sentral ng Pilipinas (BSP) hiked rates more aggressively. Since the start of its tightening cycle this year, the BSP has increased its benchmark rate four times for a total of 150 basis points. The central bank's overnight borrowing rate now stands at 4.5%. We expect rates to move even higher in the coming quarters.
